Type	Train Simulator 2020 - Addon
Author	Benjamin Ebrecht
Version	1.2
Date	11.10.2019
Contact	ebrecht@trainteam.berlin

Preamble

Dear customer,

based on the feedback to our "Scenario pack Vol. 3", we gladly comply with the numerous requests of our customers to deliver a third version of the scenarios of that addon. These additional scenarios use very complex vehicles as player engine - they address to high end simulation gamers. Please note that these additional scenarios are no official content of the product "Szenariopack Vol. 3". They need additional addons and the appropriate right to gain support is limited.

We finished our rework and deliver all scenarios as alternative version with publishing this package as version 1.2.

TrainTeamBerlin
Berlin, October 2019

System requirements

At first, a regular installation of the addon TrainTeamBerlin "Szenariopack Vol. 3" is required. The additional scenarios require on top additional addons:

- Dovetail Games: "DB BR204 Loco Addon",
  https://store.steampowered.com/app/1098161/Train_Simulator_DB_BR_204_Loco_AddOn/
- virtualRailroads: " DB BR101 InterCity ExpertLine",
  https://virtual-railroads.de/de/zug-pakete-el/58-db-br101-intercity-expertline.html
- virtualRailroads: "DB BR143 / BDnrzf VRot ExpertLine",
  https://virtual-railroads.de/de/zug-pakete-el/26-db-br143-expertline.html
- virtualRailroads: "BR143 Privatbahn ExpertLine",
  https://virtual-railroads.de/de/elloks-el/27-db-br143-privatbahn-expertline.html
- virtualRailroads: " DB BR151 VRot ExpertLine",
  https://virtual-railroads.de/de/zug-pakete-el/54-db-br151-vrot-expertline.html

Please note: the installer will detect automatically which of the required vehicles are installed and which not. The setup routine will only install such scenarios that use player engines that you have installed. If you get additional vehicles for use with these scenarios at a later time, you will have to run this installation routine again.

Installation & Configuration

Installation:

You have to execute the automatic installation routine (exe-format) for installing the additional acenarios. Follow the instructions and set your Railworks main folder when asked for. This folder is detected automatically in most cases. You finished the installation with doing this.

Uninstallation:

If you want to uninstall the additional scenarios, just run the uninstall routine which you can find in the start menu: Programs → TrainTeamBerlin → Szenariopack Seddin → „Deinstallation-Zusatzszenarien". Follow the instructions. Now the addon is removed from your PC.

Content

This version of the package contains the following scenarios:

- "TTB SP3 v3 01: RB28602 - RB22 zum Flughafen" *(Spielerlok: vR-EL BR143 VRot)*
