

<b>Typ</b>	Optional PlusPack Update
<b>Autor</b>	Benjamin Ebrecht
<b>Version</b>	1.0
<b>Datum</b>	14.04.2013
<b>Contact</b>	ebrecht@trainteamberlin.de

## 1. Preamble

This update is intended for the usage with all released TrainTeamBerlin PlusPacks and changes the keyboard layout of the safety systems SiFa and PZB of the locos in the way that they correspond with the actual RSC default keyboard layout. This version of the update contains changed keyboard layouts for the following addons:

- BR101 PlusPack
- BR143 PlusPack
- BR151 PlusPack
- BR294 PlusPack

The SiFa has now to be acknowledged with "Enter (Numpad)" and "PZB Wachsam" is on key "Page down". The keyboard controls with the Ctrl/Shift keys for (de)activating the systems have changed in an analogue way (c.f. PlusPack manuals).

### **History:**

- V1.0 first Version
- V1.1 added InputMapper for BR143PlusPack for Addons "Köln-Düsseldorf" and "Köblitzer Bergland"
- V1.2 added InputMapper for BR294PlusPack

## 2. Installation

For installing this update, go to the folder "OptMappers" which is contained in this archive. There you will find one subfolder for each addon. Each of the subfolders contains an "Asset" folder structure. If you want to install the changed keyboard layout for the Class 101 by way of example, you will just have to copy the folder OptMappers\BR101-PlusPack\Assets into your Railworks main directory. Allow to write over files.

If you want to undo this update, proceed the same way but use the folder "BackupOrg" instead of "OptMappers".
